PRZYGOTUJ SIĘ NA PYTANIA ?

1. What do you like to do?
2. Explain the architecture of Databricks.
3. What are notebooks used for in Databricks?
4. How to execute one notebook from another notebook?
5. Explain the difference between Databricks and Apache Spark.
6. How do you create a cluster in Databricks?
7. How does Delta Lake improve data reliability?
8. How do you schedule jobs in Databricks?
9. How to execute the same notebook in parallel?
10. How does Delta Lake handle schema evolution, it is automated?
11. Describe the Databricks Runtime.
12. What is DBFS (Databricks File System) and how do you interact with it?
13. What is the purpose of libraries in Databricks?
14. What is a job cluster in Databricks?
15. How do you import data into a Databricks notebook?
16. What is time travel in Delta Lake and when to use it?
17. Explain how to perform data visualization in Databricks.
18. What is Auto Loader?
19. How can you use SQL in Databricks?
20. How do you read a CSV file in Databricks?
21. Explain how to write data to a Delta table.
22. Difference between external and managed tables?
23. What are some common data sources you can connect to in Databricks?
24. What is the purpose of the OPTIMIZE command in Delta Lake?

25. What is the difference between Data Lake and Data Warehouse?
26. Explain what Z-ordering is and when you would use it.
27. How can you version control your notebooks in Databricks?
28. What are the different types of clusters in Databricks compare All-Purpose vs Job clusters.
29. What actions can you perform using Databricks CLI?
30. How can you troubleshoot job failures in Databricks?
31. How do you schedule notebooks to run at specific times?
32. What are the use cases for Databricks Jobs?
33. What are the different storage formats supported by Databricks?
34. What are the implications of using serverless compute in Databricks?
35. Explain the concept of idempotency in data pipelines.

PLAN NA PRZYSZŁOŚĆ

Databricks Intelligence Platform

- Enable features that simplify data layout decisions and optimize query performance.
- Explain the value of the Data Intelligence Platform.
- Identify the applicable compute to use for a specific use case.

Development and Ingestion

- Use Databricks Connect in a data engineering workflow.
- Determine the capabilities of Notebooks functionality.
- Classify valid Auto Loader sources and use cases.
- Demonstrate knowledge of Auto Loader syntax.
- Use Databricks' built-in debugging tools to troubleshoot a given issue.

Data Processing & Transformations

- Describe the three layers of the Medallion Architecture and explain the purpose of each

layer in a data processing pipeline.

- Classify the type of cluster and configuration for optimal performance based on the

scenario in which the cluster is used.

- Emphasize the advantages of LDP (for ETL process in Databricks).
- Implement data pipelines using LDP.
- Identify DDL (Data Definition Language)/DML features.

- Compute complex aggregations and Metrics with PySpark Dataframes.

Productionizing Data Pipelines

- Identify the difference between DAB and traditional deployment methods.
- Identify the structure of Asset Bundles.
- Deploy a workflow, repair, and rerun a task in case of failure.
- Use serverless for a hands-off, auto-optimized compute managed by Databricks.
- Analyzing the Spark UI to optimize the query.

Data Governance & Quality

- Explain the difference between managed and external tables.
- Identify the grant of permissions to users and groups within UC.
- Identify key roles in UC.
- Identify how audit logs are stored.
- Use lineage features in Unity Catalog.
- Use the Delta Sharing feature available with Unity Catalog to share data.
- Identify the advantages and limitations of Delta sharing.
- Identify types of delta sharing- Databricks vs external system.
- Analyze the cost considerations of data sharing across clouds.
- Identify Use cases of Lakehouse Federation when connected to external sources
